VEHICLE WHEEL CLEANING / WASHING DURING THE CONSTRUCTION

During the ground works operations, and at all other times where vehicles are traversing unsurfaced ground, vehicles exiting the site may carry deposits of clay or wet concrete, trapped on their tyres, out on to the street.

To prevent this occurring, a wheel cleaning regime will be implemented. Wheel cleaning will consist of two simple operations carried out by designated operative, suitably attired for this work.

1. Before leaving, the vehicle will stop and turn the engine off. If necessary any heavy deposits will be removed manually using scrapers or the like.

2. Following step one, wheels will be washed using a high pressure jet wash lance ensuring that any residual deposits lodged in the tyres are removed. If required the vehicle will move forward slightly to ensure that the complete circumference of the wheel is clean.

On completion wheels will be inspected and confirmed that the vehicle is fit to leave site.

The site operatives will ensure that water used during wheel washing operations does not migrate out onto the main highway.

Please note that wheel washing will be re-introduced at any / all times where there is any possibility of mud, clay, concrete, or any other form of vehicle wheel carried debris, being carried out onto the highway.
